

MARCH 16 – LITERATURE SEARCH

LITERATURE SEARCH TOOLS

- Let's compare different LLM tools for reference search. We'll be looking (at least at) [Asta](#) (Allen AI), [Google Scholar Labs](#), and [SciSpace](#). If you work in Astronomy, you can also use Pathfinder.
- Run a search on a topic familiar enough that you'll be able to evaluate the results. For example, I ran the following prompt:

I need a set of papers to learn the basics about the ocean carbon cycle, suitable for advanced undergraduate or beginning graduate students.

- Report your qualitative assessment of
 - 1) the quality of the lists, in particular looking at 1) Relevance of results; 2) Missed seminal references; 3) Evident biases (for example, towards books vs papers, famous/less known, old/new.
 - 2) What other tools are offered (summaries, reference formatting, follow-up questions, attribution of content within references
 - 3) Your final pick (if any)
