

APRIL 13

AI FOR PRESENTATIONS

AI FOR COMMUNICATION

Let's think about what we may like to use AI for in presenting or communicating.

- 1) Research presentation (create, adjust)
- 2) Infographics
- 3) Images (esp for pedagogical purposes)
- 4) Demo applet (widgets, slider plots)
- 5) Ask AI to critique an audio file of a presentation
- 6) Diagrams (so far unsuccessful)
- 7) Posters (so far ☹)
- 8) Movies (time series of snapshots)
- 9) Create a presentation in team with AI and have AI deliver a presentation

(somewhat related, I was looking for resources on good communication and I found this collection of scientific manuals):

<https://biblio.sns.it/en/scientific-writing-manuals>

SOME RESOURCES I FOUND

- **NotebookLM** – often best in class, I will demo.
- **ChatGPT** – agent mode - "Presentation"
- **Gamma** – Dubbed by Claude as “best pure AI presentation builder.” Prompt → slides. I can show my experience.
- **Tome** – Good for narrative-driven decks. <https://ppt.ai/tome-ai-ppt> Have not tried.
- **Adobe Express** – Also promises easy production of docs and images from references (may be free for CUNY students!)
- **Claude** is quite good for applets/demos

SIMILAR TO NOTEBOOK LM

- **Napkin AI** – Paste text and it auto-generates infographics, diagrams, mind maps, flowcharts, and data charts.
- **SlideSpeak** – Upload PDFs, Word, or Excel files and it generates slides with AI-generated infographics and charts. Exports to editable PowerPoint or Google Slides. Worth trying with a research paper!

TASK

- Think about one task you would like to accomplish that has to do with communication or presentation
- Take time to take a look at the tools we mentioned or to look for new ones and propose them
- Define “success”: what are your target goals for the product you are creating?
- How long would it take you to do it without AI, and how optimistic do you feel about the final product?
- Let's write these down in our shared doc, and we'll work on it and exchange results on Wednesday.

RESULTS

These two have consistently topped the ranks for us

- NotebookLM (Gemini)
- Very strong graphical elements, which can be used as standalone products;
- Tends to have a very recognizable fingerprint
- Editing is not direct (exported PPTX are images; revisions are made through “revise” button)
- Adobe Express (I like in particular <https://new.express.adobe.com/home/tools/generate-presentation>)
- Clean presentations, graphical elements are less compelling
- **Direct editing** available (huge advantage)
